Rev. September 15, 2017

Sargon Demo installation is very easy and does not require particular tricks.

If the program is going to be installed on a local net, there is no problem in installing the program on server.

We suggest using the program with screen resolution not less than 1920x1080. Using lower screen resolution some buttons may get out of screen. Toolbars, anyhow, are customizable.

To install the program just execute "setup_english.exe" in the CD root or installer folder. This must be done with admin's rights (click right and choose "Execute As Administrator", or alike). Then choose "Install". We suggest to keep as installation folder "C:\WSARGON" which is the default, however you can choose any folder you wish. We strongly suggest to keep work folder different from installation folder.

The program has an English interface and an English help (not aligned with the Italian one, the translation is currently being upgraded).

Castalia is ready to help in the start up phase.
